Settings page - demo

Refactor of the Settings modal into a full page, following design/screens/settings-structure.md and settings-pages.md (PR #196).

9 pages: Repositories, Docs, AI, Board assistant, Appearance, Storage & backup, Integrations, Updates (desktop), Diagnostics. Search, direct links, inline import confirmation, narrow-window list.

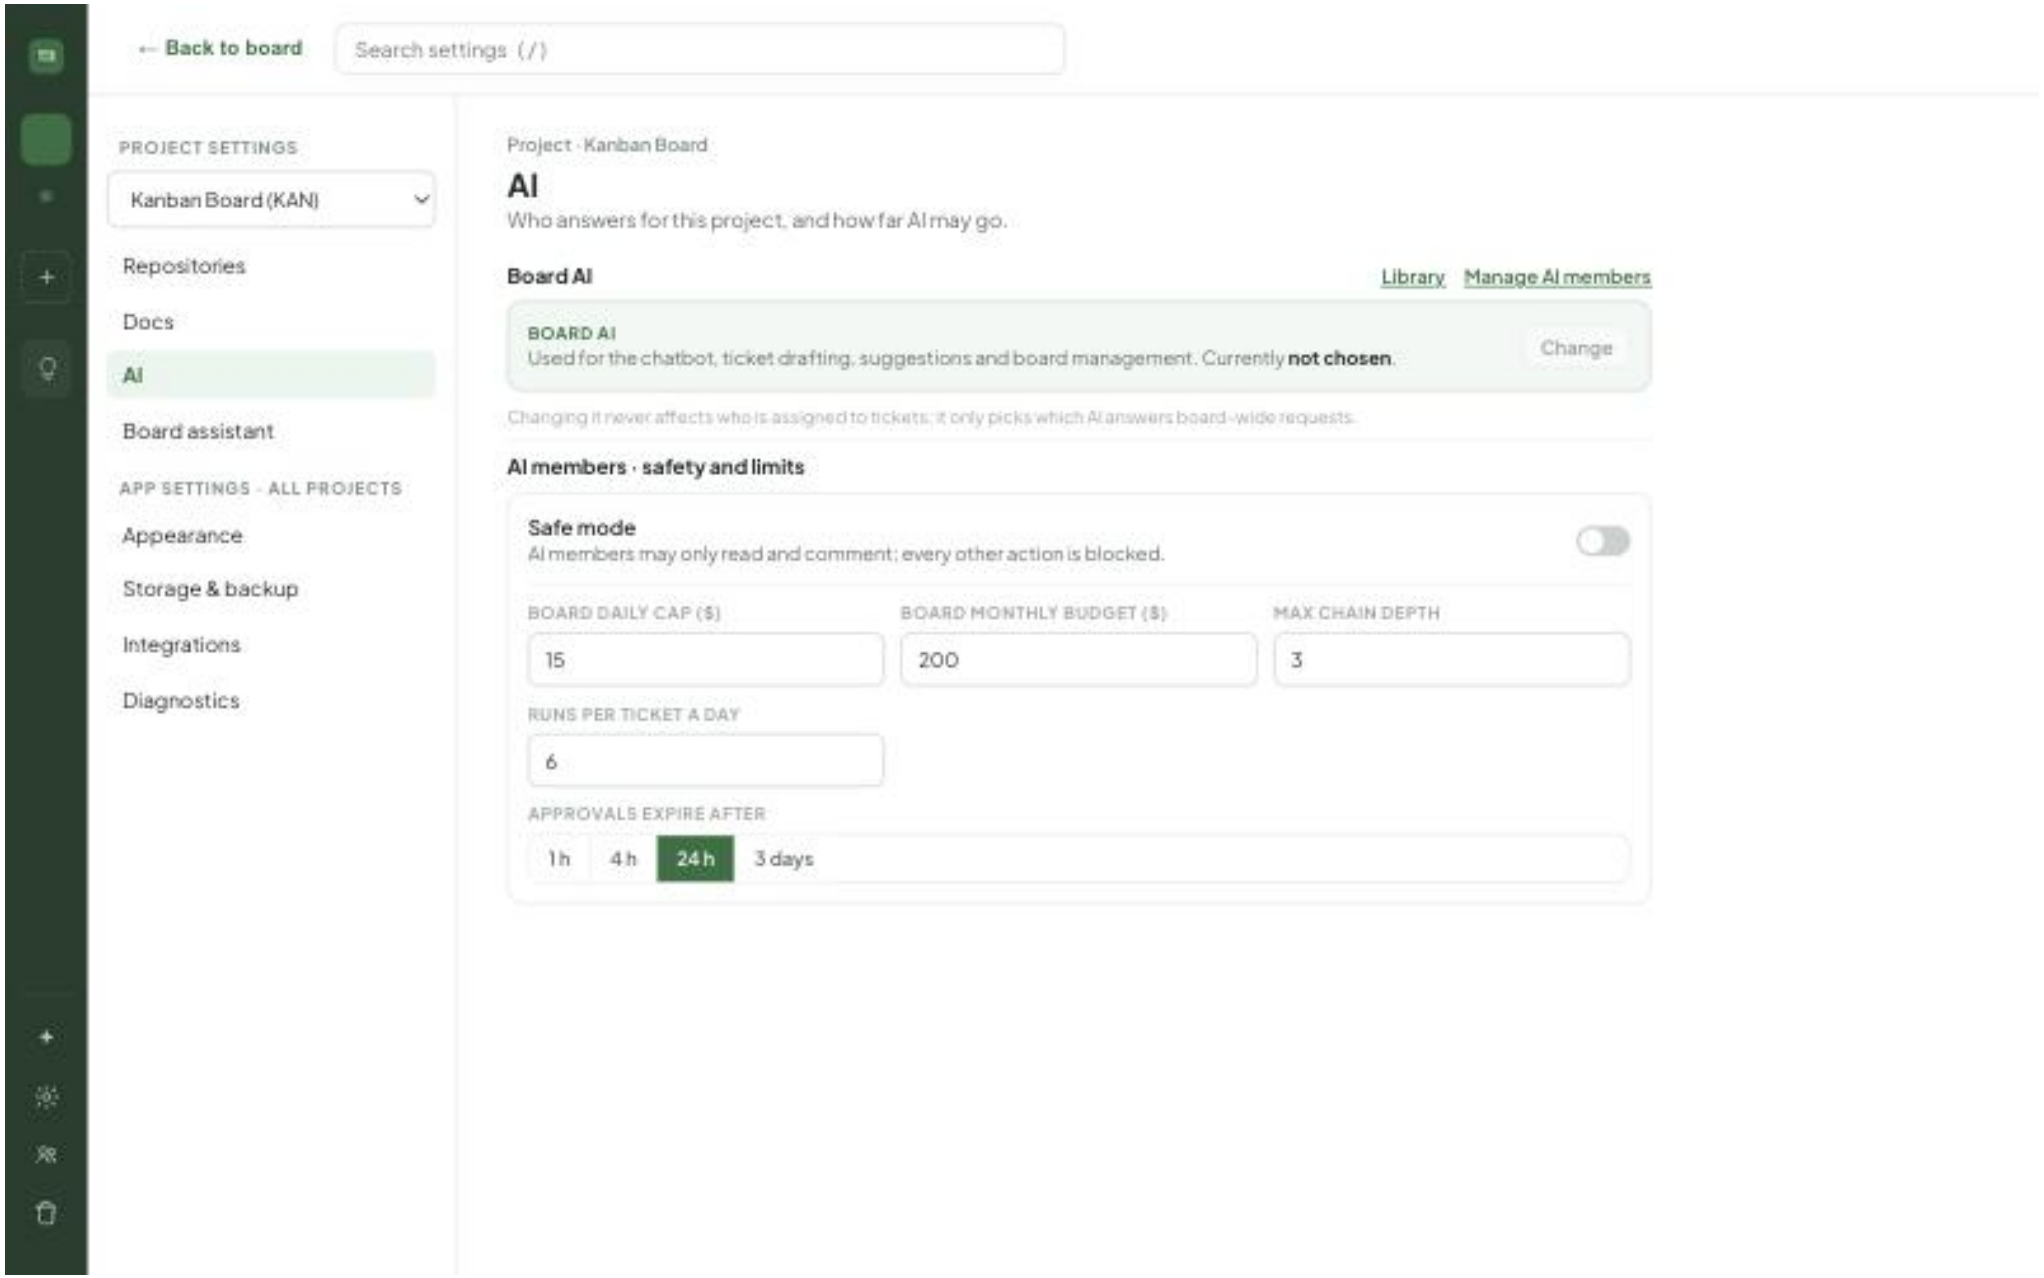

Settings is now a full page

Back to board, a list of pages grouped into Project settings (with a project picker) and App settings. Direct link: ?settings=repositories.

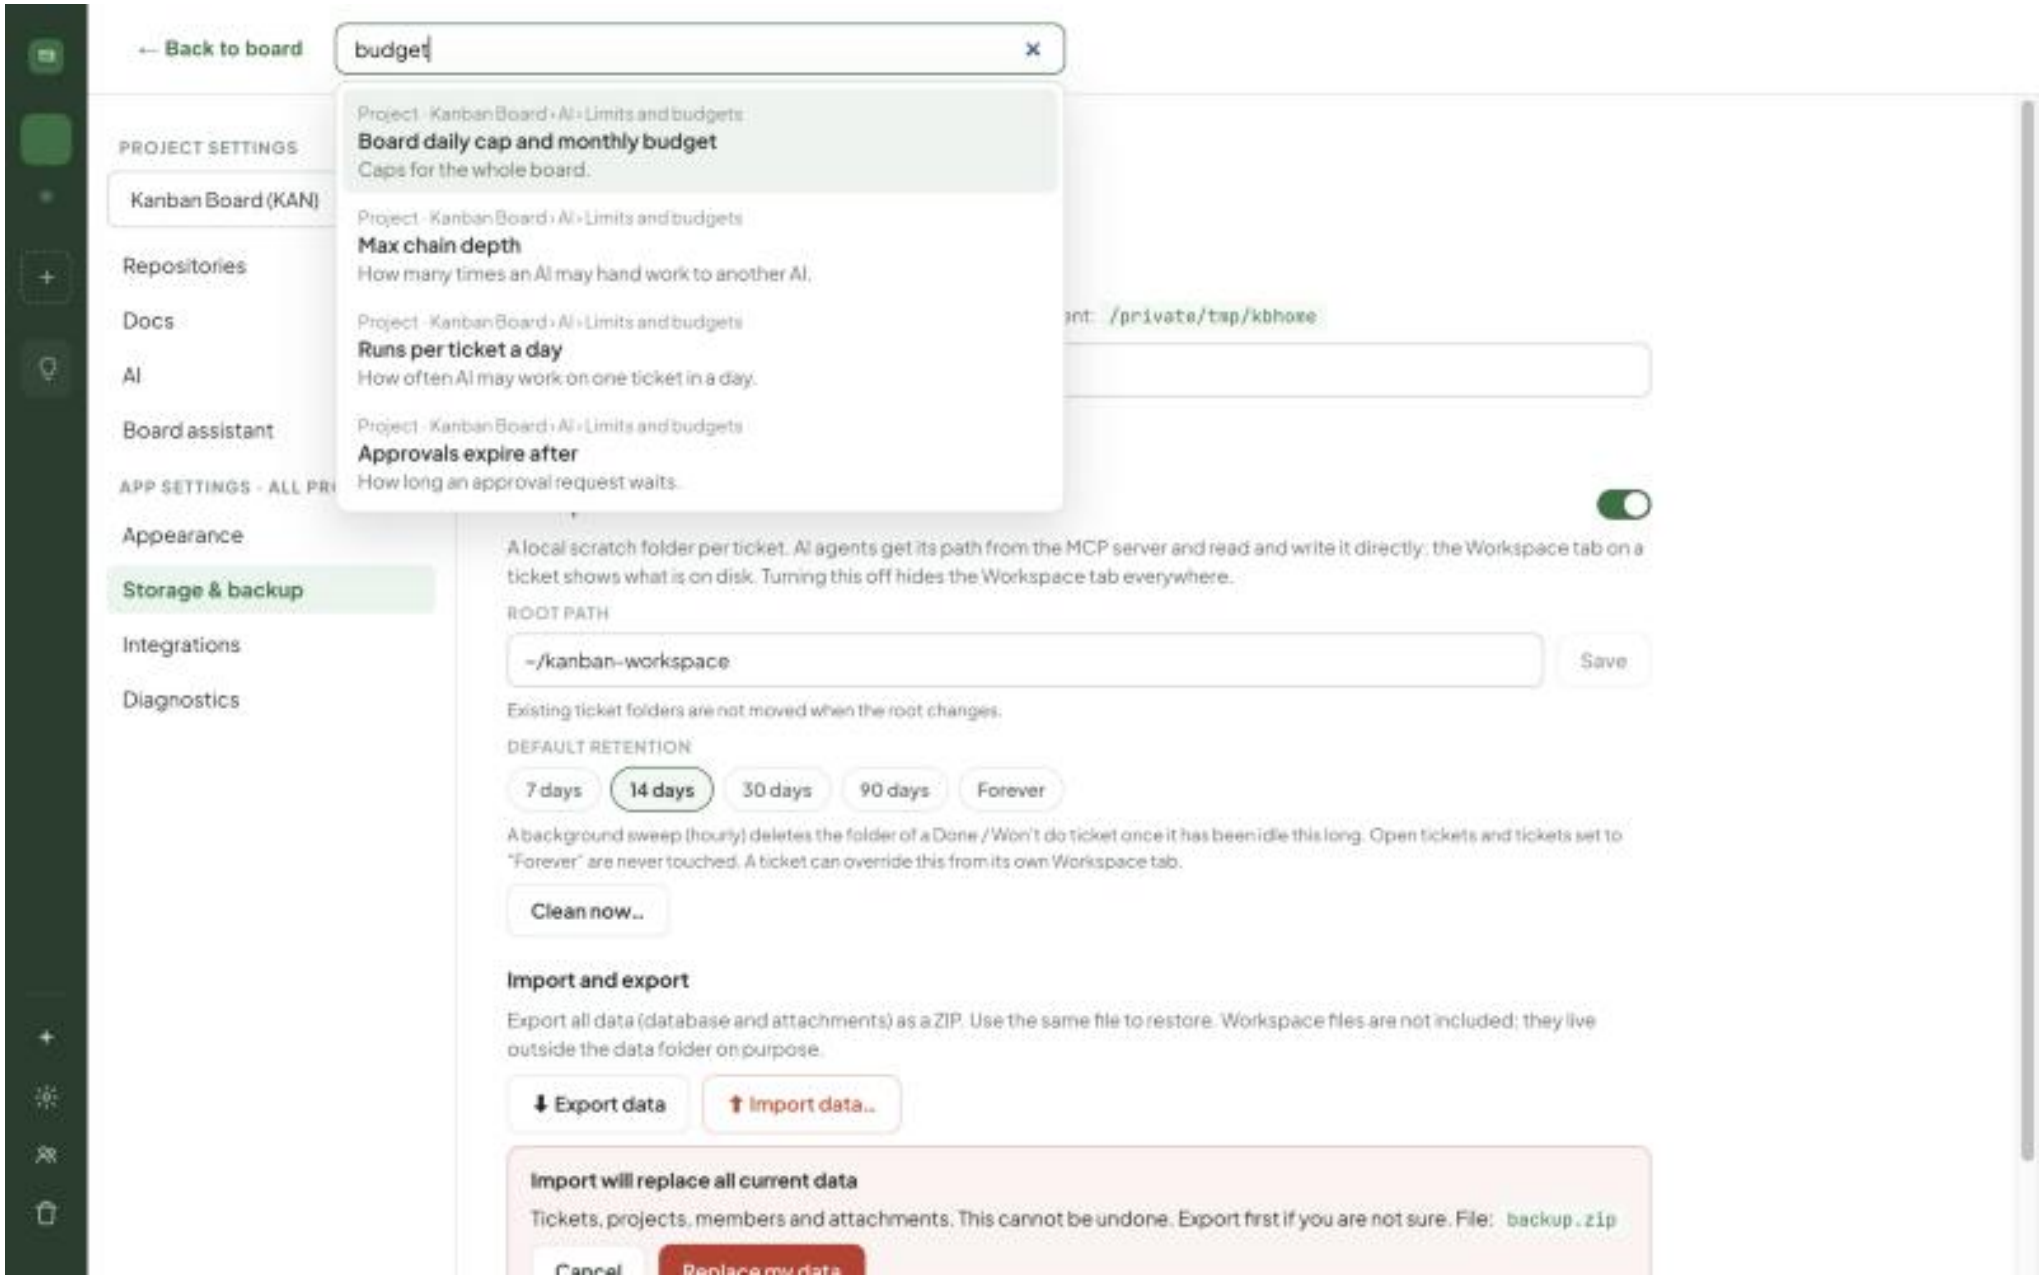

Project > AI

Board AI, safe mode and limits on one short page. The board assistant moved to its own page.

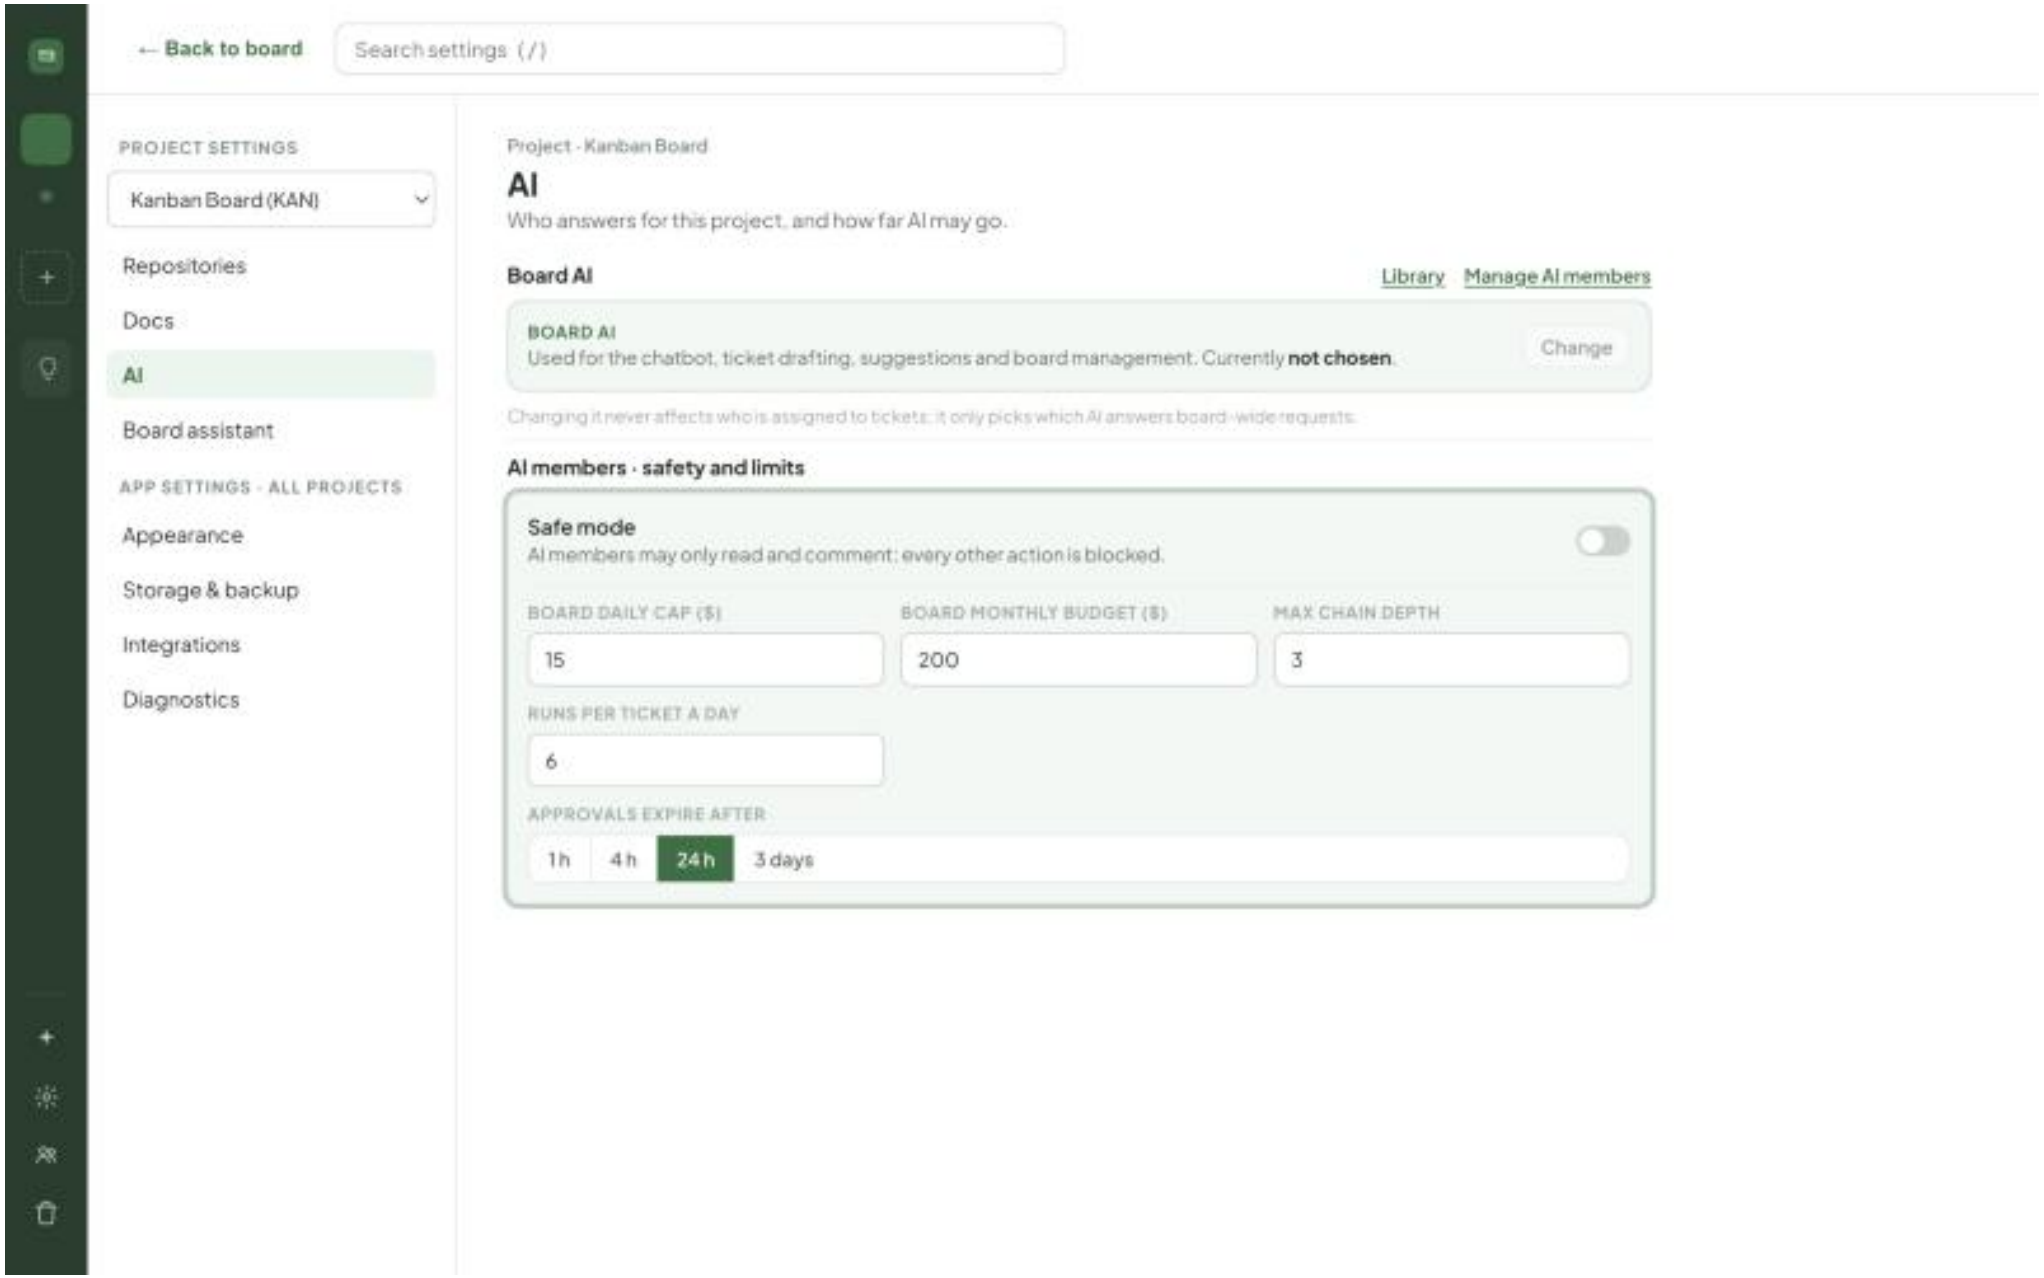

Search + inline import confirmation

Search finds a setting by name or description; Import now asks inline instead of a browser pop-up.

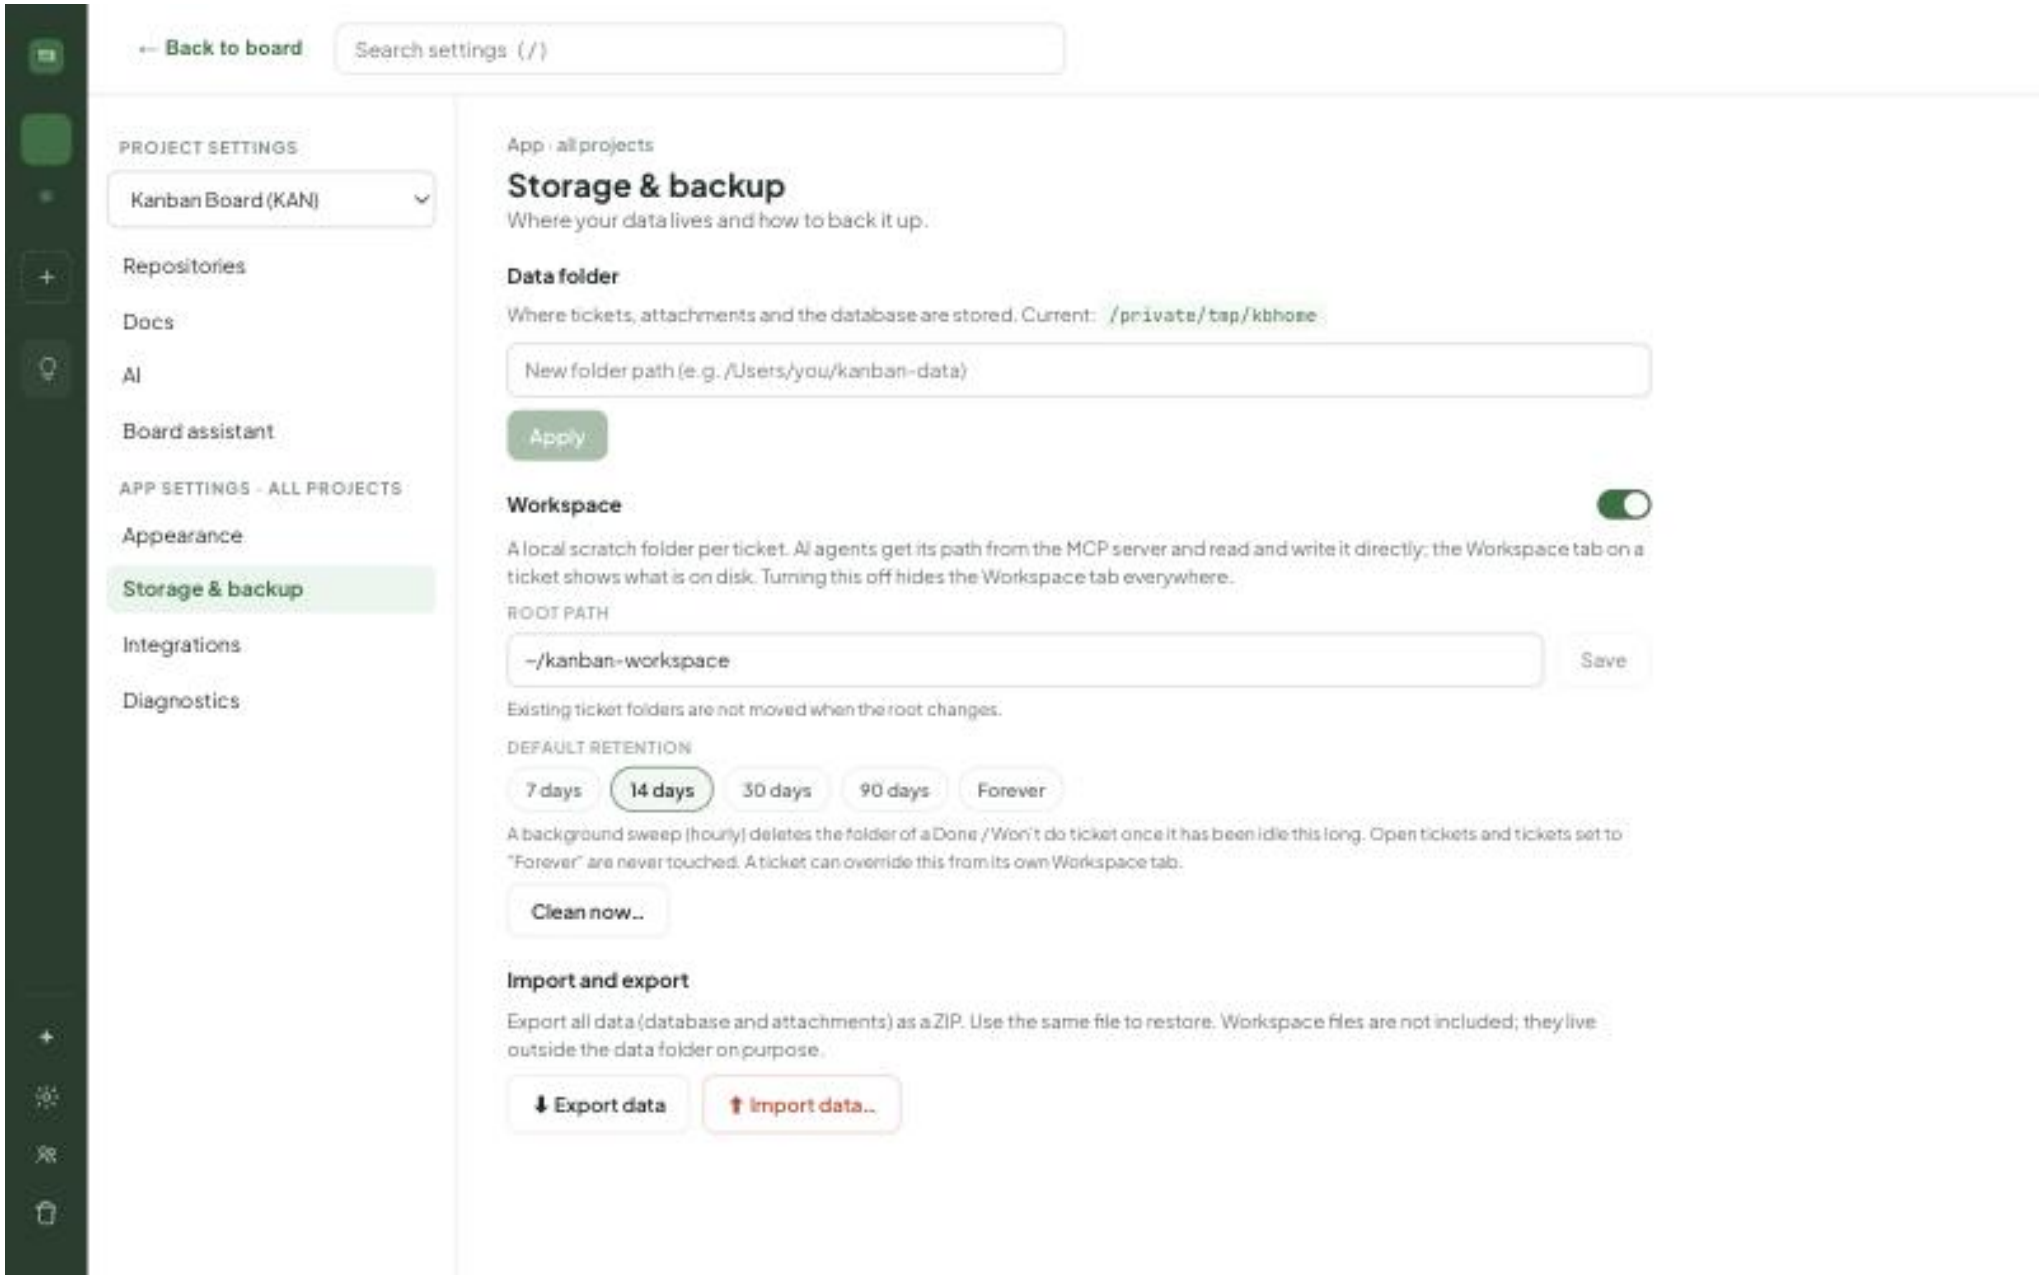

Search jumps to the setting

Enter opens the page and highlights the setting.

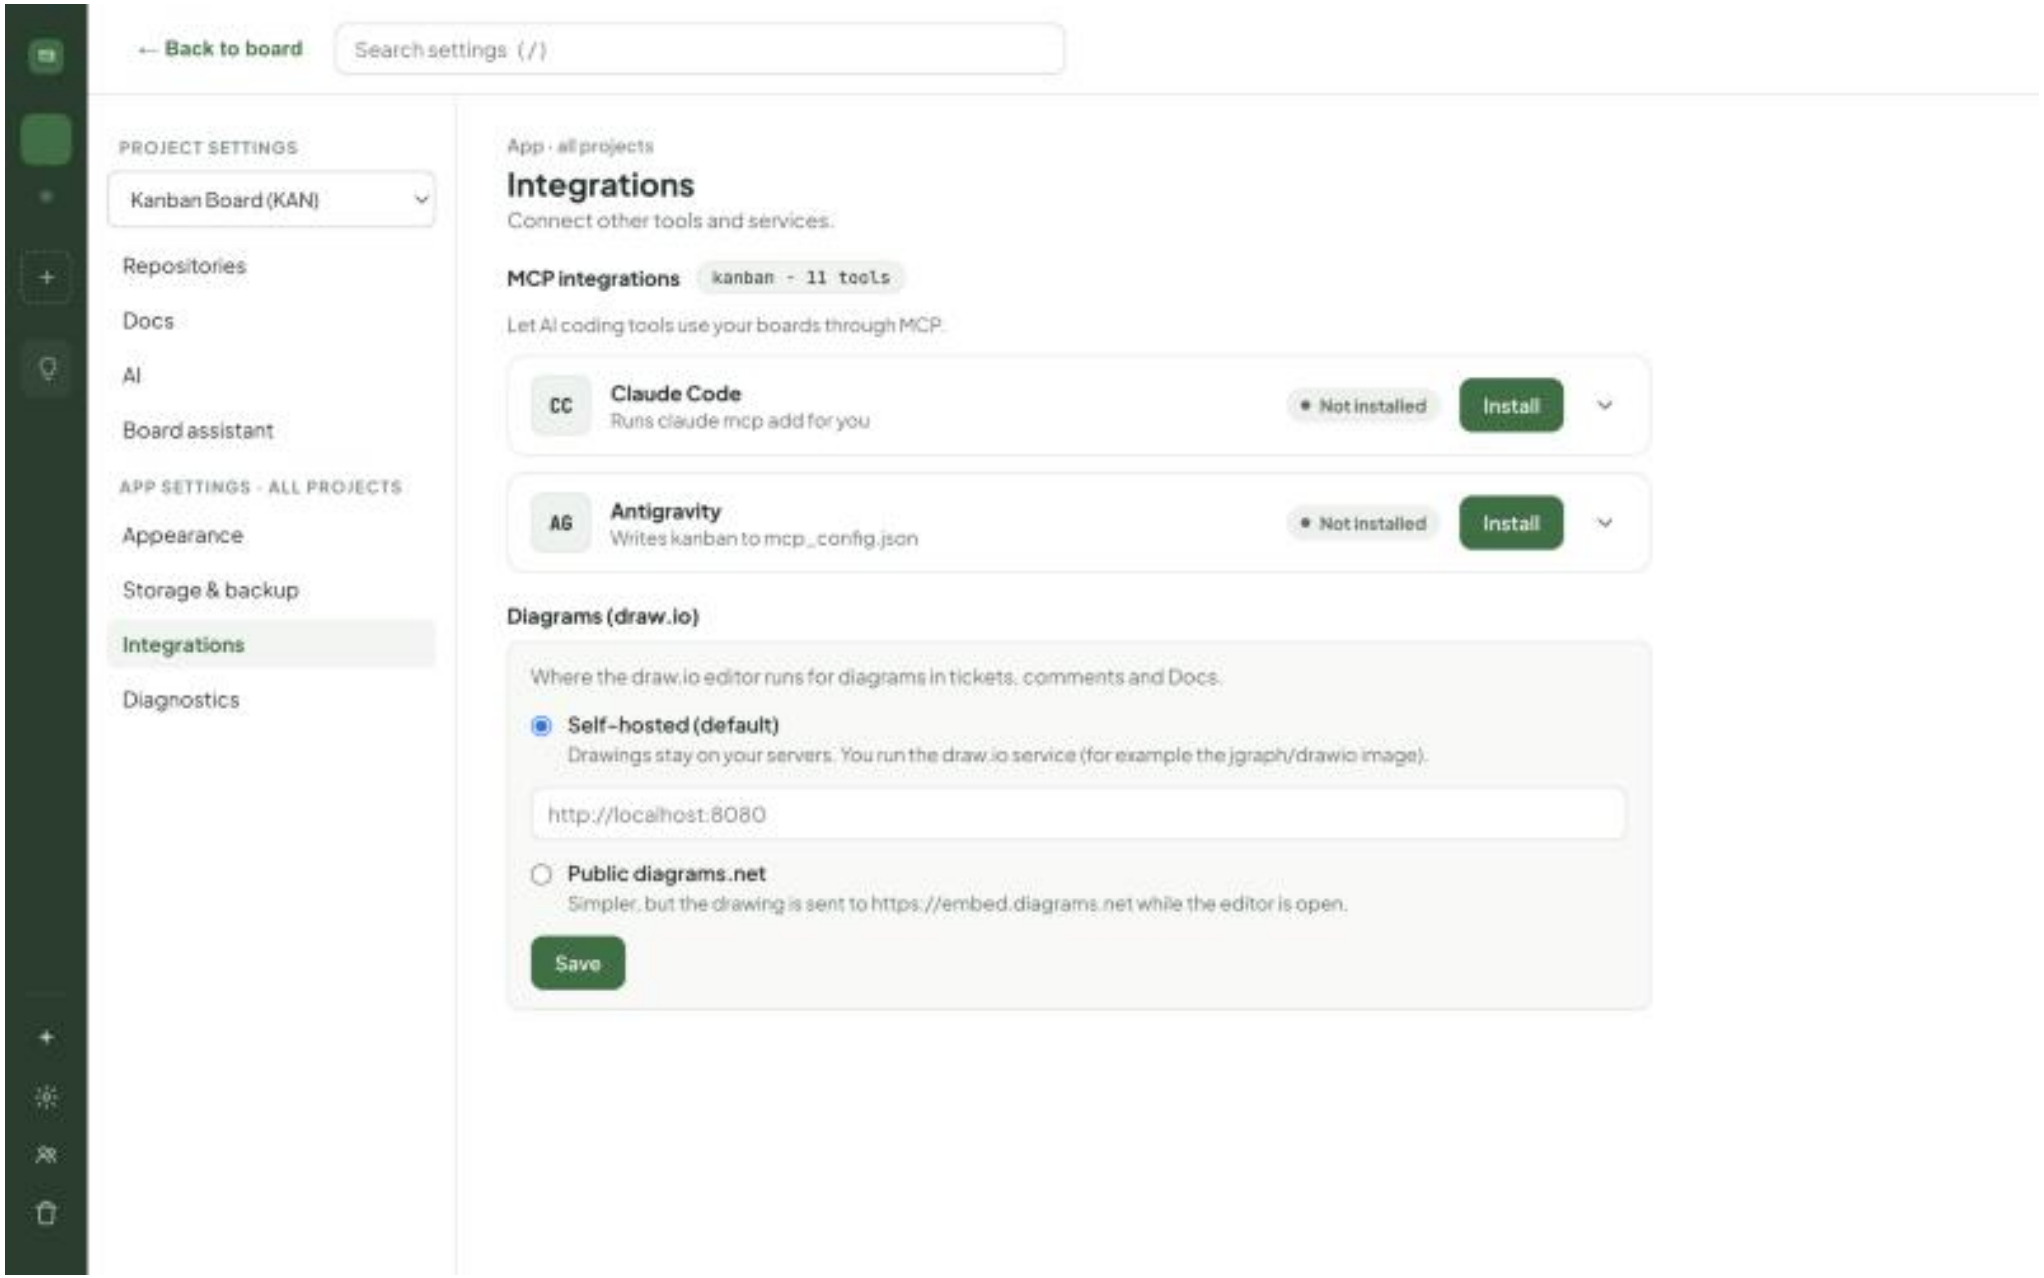

App > Storage & backup

Data folder, workspace, export and import together.

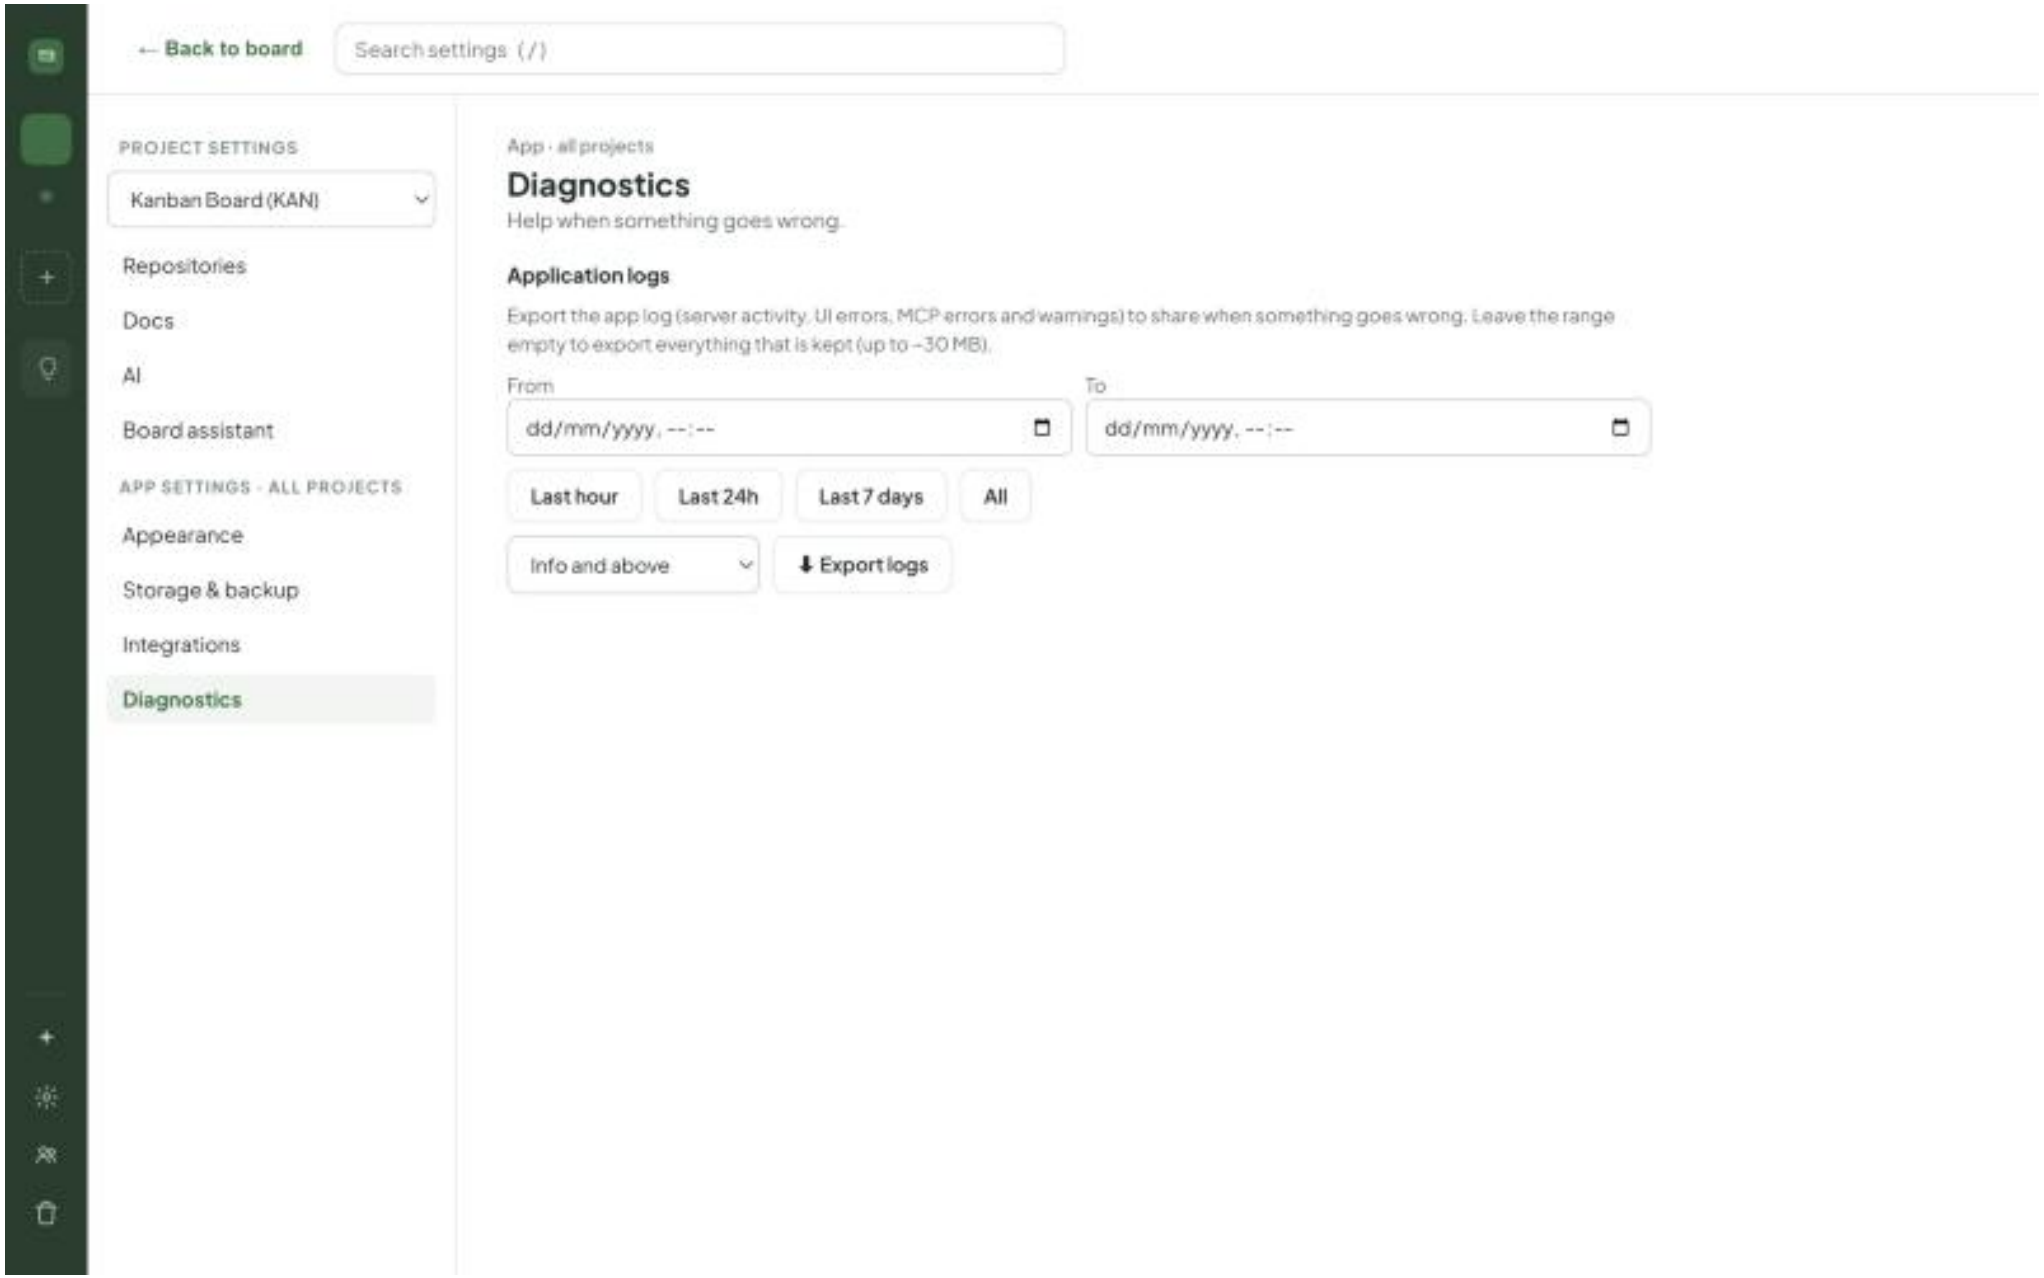

App > Integrations

MCP integrations and draw.io.

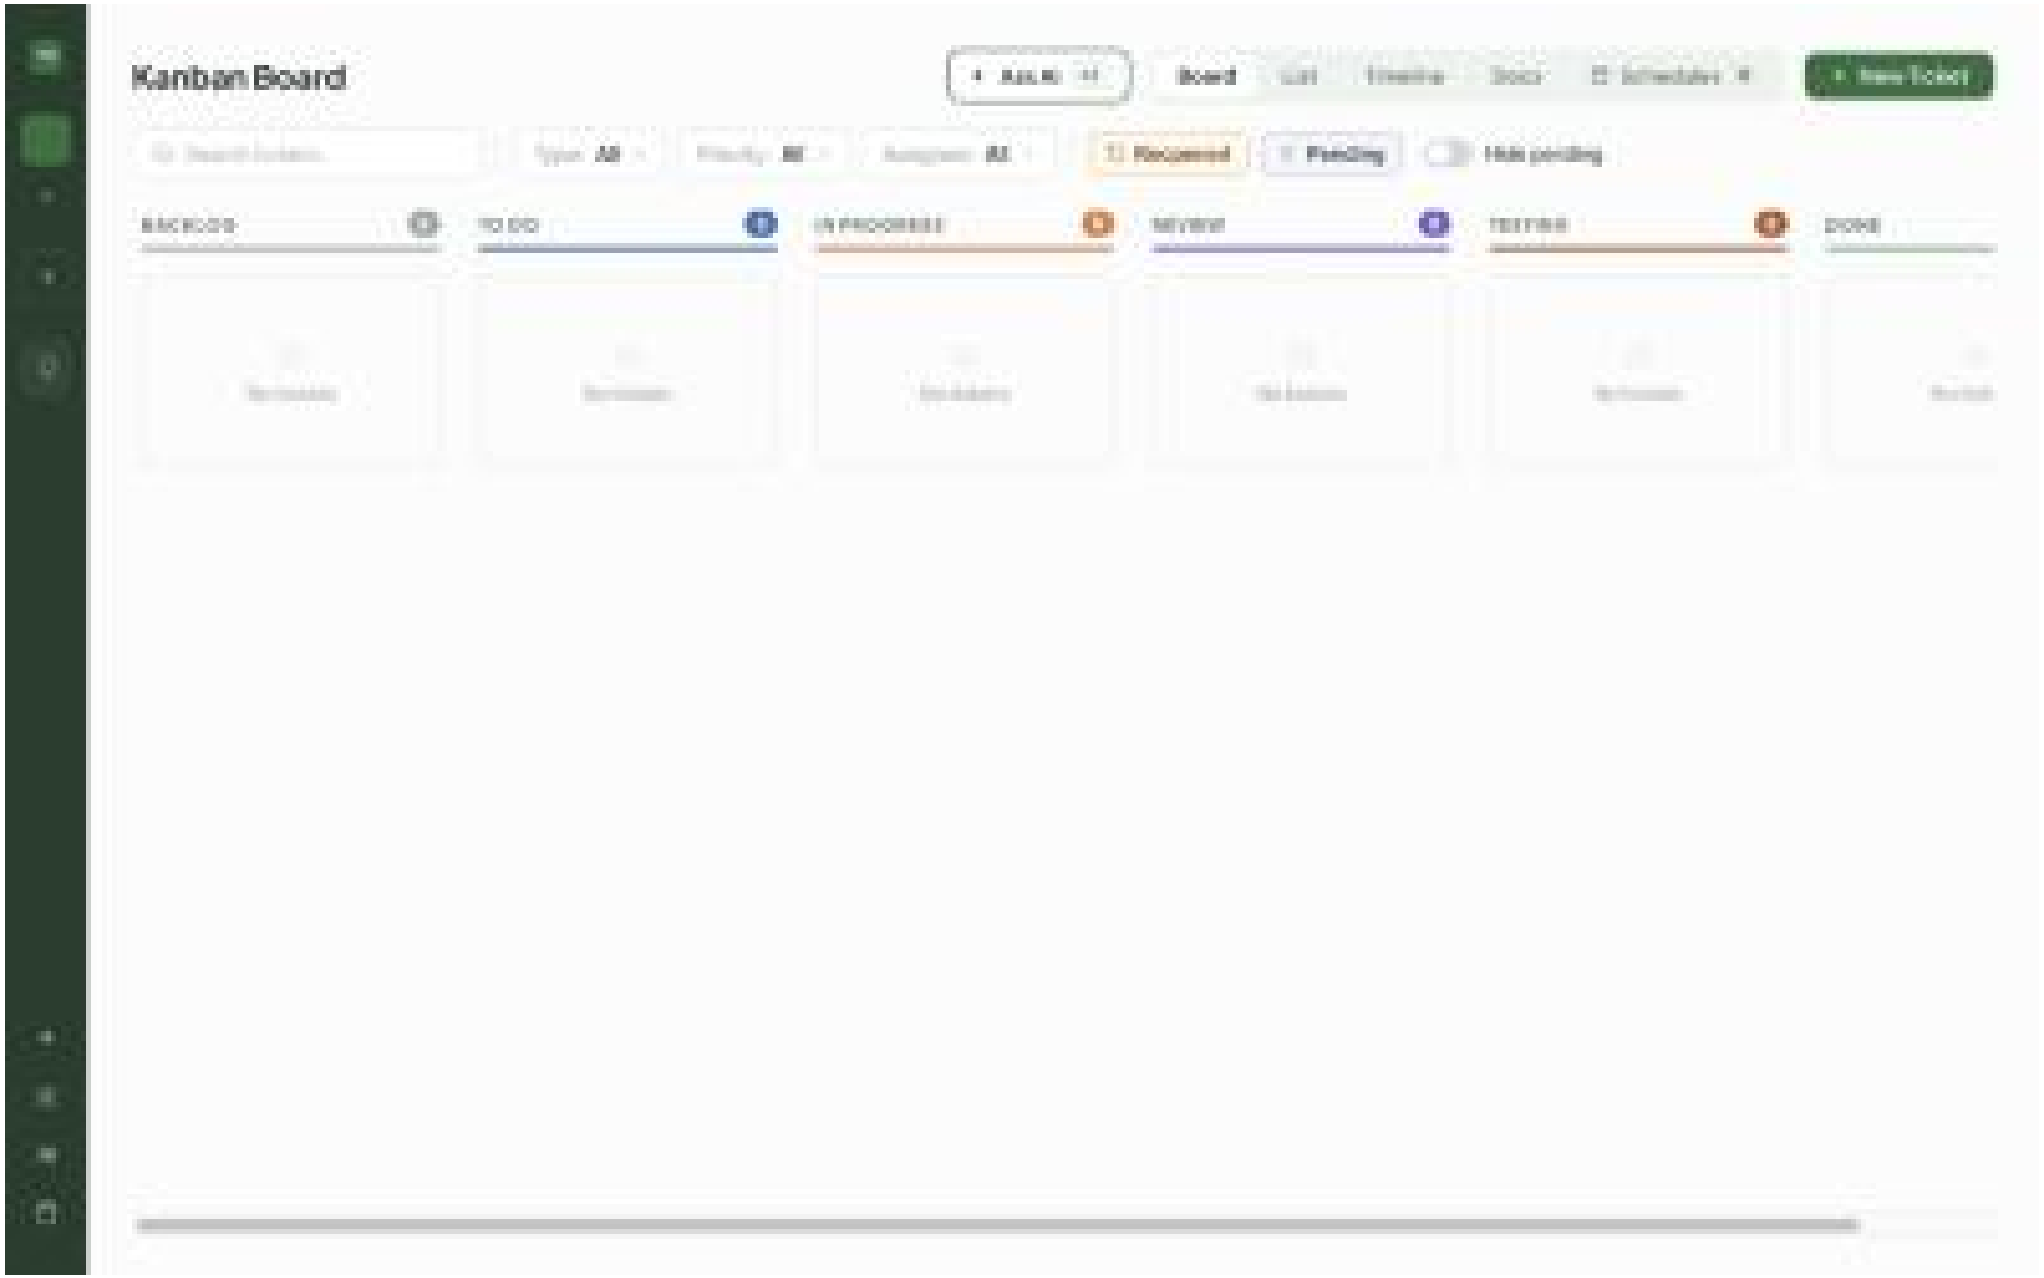

App > Diagnostics

Application logs export.

Back to board

Back to board (or Esc) returns to the board.

Narrow windows

The list collapses into a drop-down.
